

# Standardised Work: Creating Workpackages

# The 2 Routes to Workpackage Implementation

## Route A

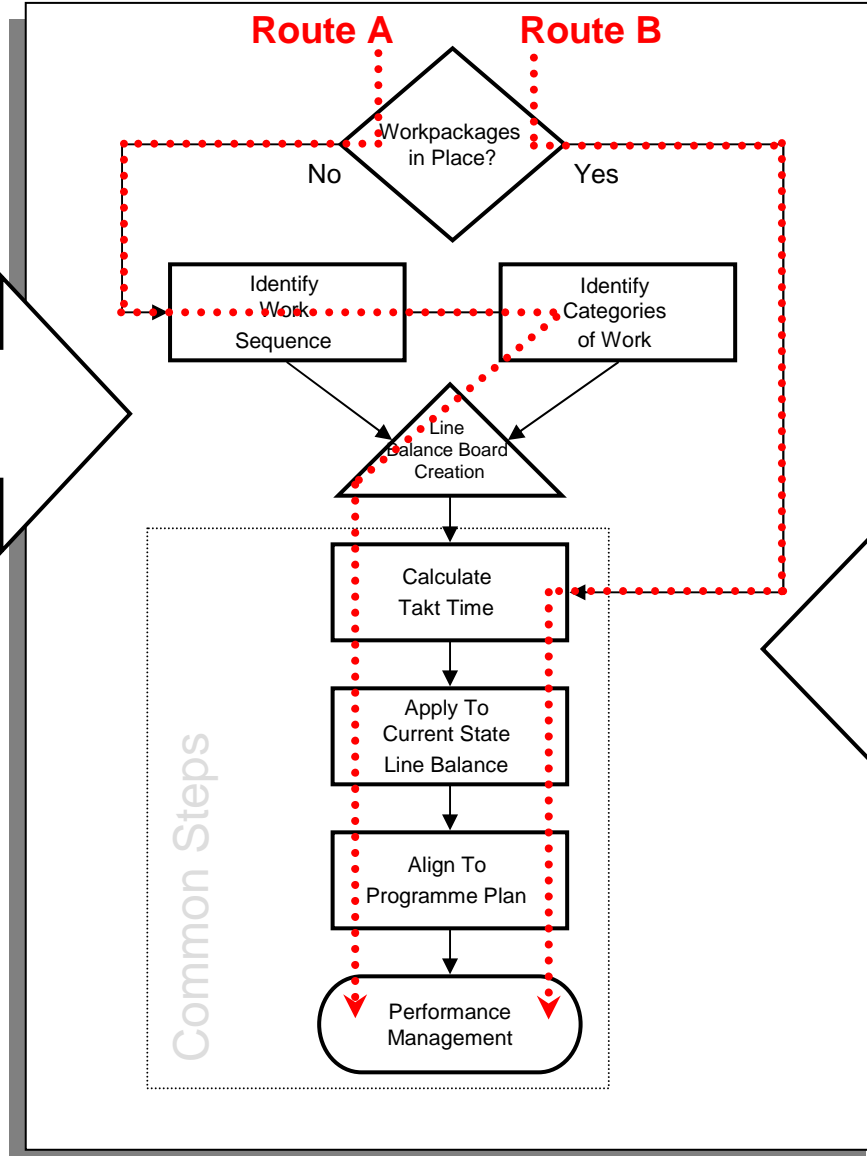

### Workpackages *Not* In Place

#### Implementation Involves:

- Data analysis & capture
- Line balance creation
- Calculation of Takt Time
- Balancing to Takt
- Alignment to Programme Plan
- Inclusion into Performance Management System

#### Use when:

- There's a requirement to match pace of production to customer demand
- Trying to create man/material flow

## Route B

### Workpackages *In* Place

#### Implementation involves:

- Calculation of Takt Time
- Rebalancing to suit new Takt
- Re-alignment to Programme Plan
- Inclusion into Performance Management System

#### Use when updating Workpackages:

- Rate change
- Level of resource change
- Removal of Waste/Reduction of NVA

# Route A: Identify Work Sequence & Categories of Work

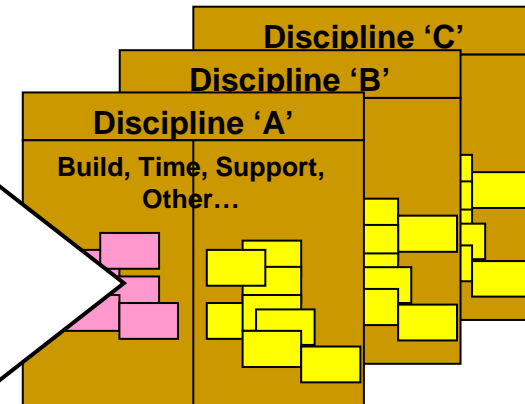

## 1. Map the current operational processes

- Identify 'who does what & when' (Tasks & Times)
- Identify Critical Build Sequence
- Identify the categories of work - Value Added, Non-Value Added & Waste Activities

## 2. Collect issues with current processes

- Build (*Sequence of, process interference etc*)
- Time (*questioning the current package allowance etc*)
- Support (*Engineering, Quality, Support, Operations etc*)
- Other (*anything else...*)
- Create Tactical Implementation Plans to resolve issues

# Route A: Line Balance Board Creation

## 1. Transfer operational processes onto strips

- Opportunity to discuss & resolve 'Build' issues
- Use Coloured magnets/paper strips to show the categories of work (VA, NVA, Waste)

# Route A/B: Calculate Takt Time

$$\text{Takt Time} = \frac{\text{Total Time Available}^*}{\text{Total Customer Demand}} \quad (* \text{ minus agreed losses – lunch, breaks etc})$$

## Example:

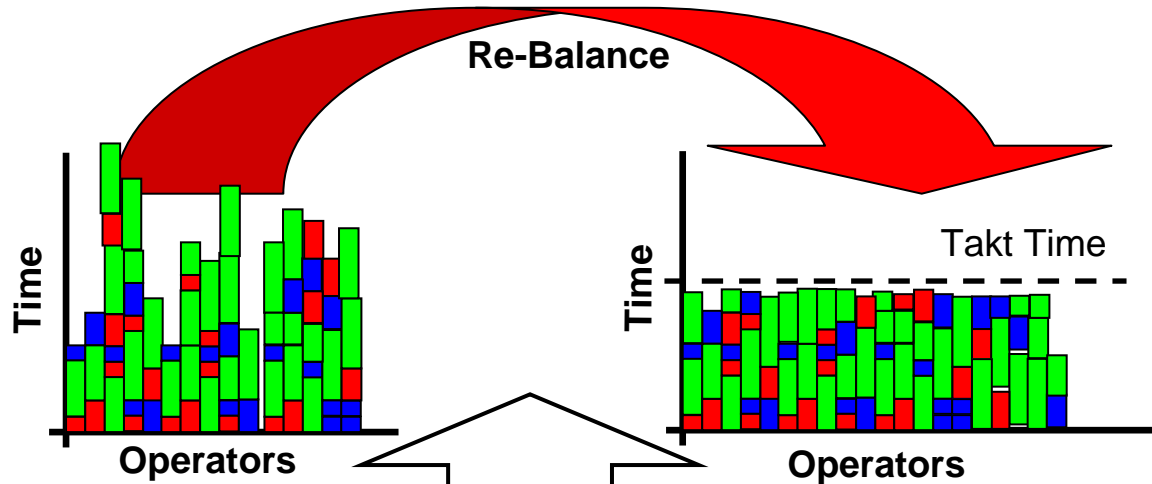

$$\begin{aligned} \text{Takt Time} &= \frac{300 \text{ Hours/Month}^*}{12 \text{ Units/Month}} && (* \text{ minus agreed losses – lunch, breaks etc}) \\ &= 25 \text{ Hours} \end{aligned}$$

## 1. Calculate the 'drumbeat' for production

- Calculate the frequency at which the production system must produce quality product
- In the above example, a Unit must be produced every 25 hours to satisfy the requirement of 12 Units/Month

# Route A/B: Apply Takt Time to Current State Line Balance

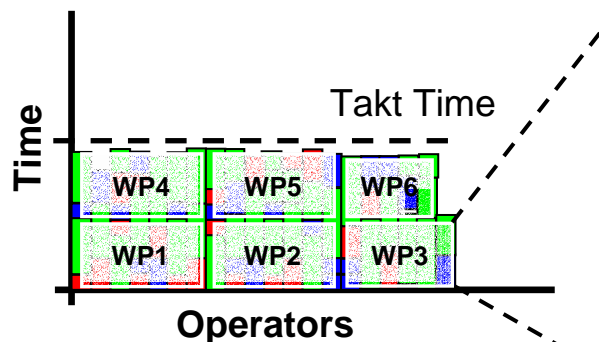

## 1. Rebalance processes to suit Takt Time

- Maintain critical build sequence & re-balance 'floating' tasks
- Identify manning & capacity requirements to work to Takt Time

## 2. Create Workpackage documentation

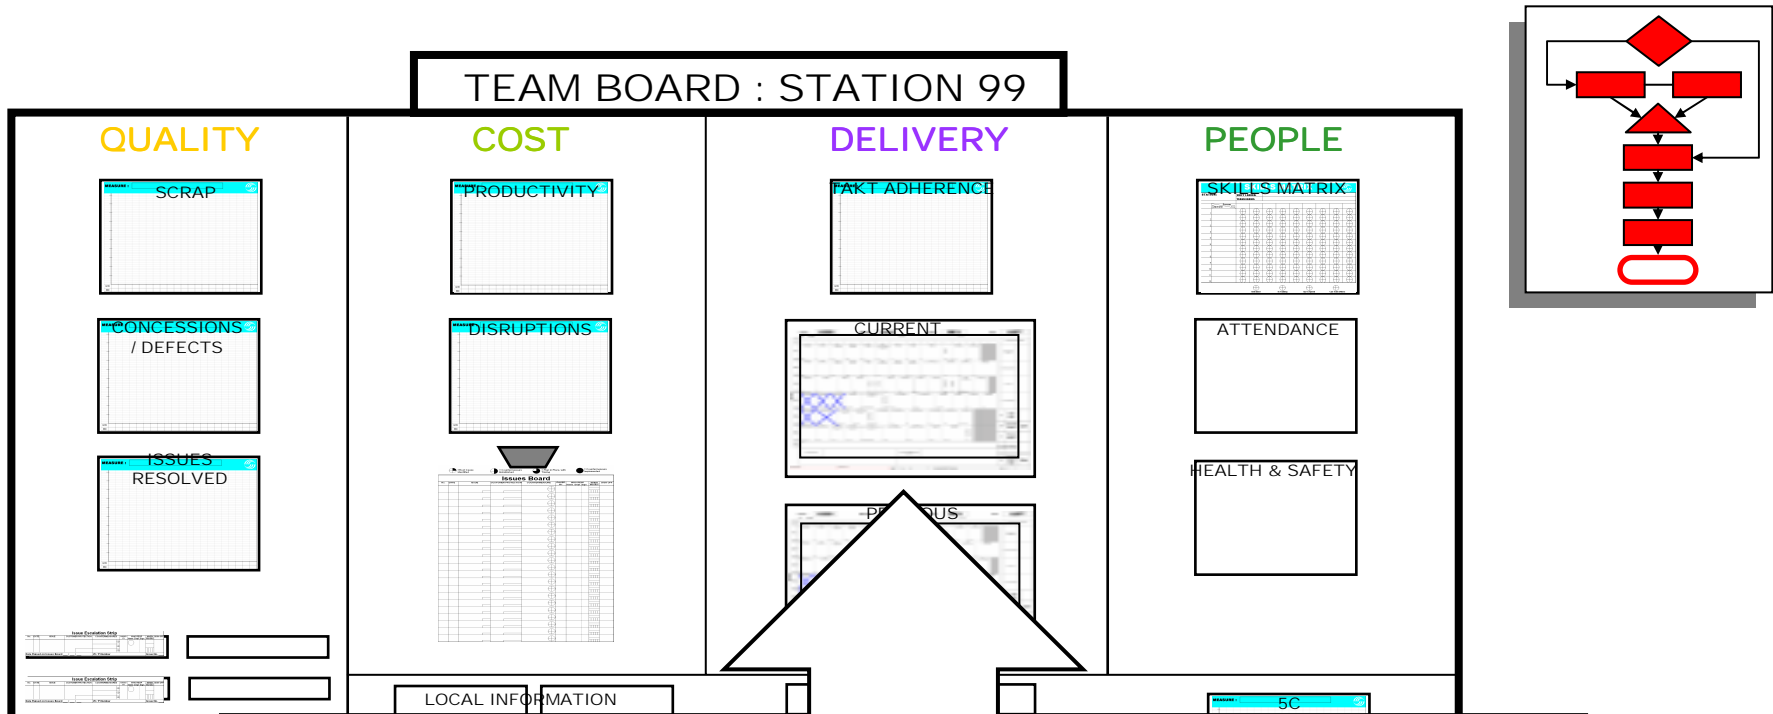

- Create workpackage documentation according to team/workstation requirements
- Agree a suitable management time frame for updating of status (i.e. 1 hour, 1 shift etc)

Operator	Task	Start	End	Color
WP1	Task 1	0:00	0:15	Green
WP1	Task 2	0:15	0:30	Blue
WP1	Task 3	0:30	0:45	Red
WP1	Task 4	0:45	1:00	Green
WP2	Task 1	0:00	0:15	Green
WP2	Task 2	0:15	0:30	Blue
WP2	Task 3	0:30	0:45	Red
WP2	Task 4	0:45	1:00	Green
WP3	Task 1	0:00	0:15	Green
WP3	Task 2	0:15	0:30	Blue
WP3	Task 3	0:30	0:45	Red
WP3	Task 4	0:45	1:00	Green
WP4	Task 1	0:00	0:15	Green
WP4	Task 2	0:15	0:30	Blue
WP4	Task 3	0:30	0:45	Red
WP4	Task 4	0:45	1:00	Green
WP5	Task 1	0:00	0:15	Green
WP5	Task 2	0:15	0:30	Blue
WP5	Task 3	0:30	0:45	Red
WP5	Task 4	0:45	1:00	Green
WP6	Task 1	0:00	0:15	Green
WP6	Task 2	0:15	0:30	Blue
WP6	Task 3	0:30	0:45	Red
WP6	Task 4	0:45	1:00	Green

# Route A/B: Performance Management

## 1. Display Workpackage documentation at the place of work

- Increase Visual Management at the workstation
- Process ownership clear with key stakeholders involved
- Workpackage Status to be updated at the agreed management time frame interval
- Issues regarding workpackage adherence to be raised, resolved & escalated if necessary from this location
